Don't Miss the Message of a Near Miss!

Near misses are accidents waiting to happen

The only difference between a near miss and an accident is a fraction of a meter or a second in time.

Report all near misses right away

Most accidents are preceded by multiple near misses. Report them to your supervisor so he can pinpoint the problem, and take corrective action.

If possible, remove the hazard immediately

Do your part to protect your co-workers and yourself. But remember don't forget to report the hazard, even if you removed it.

Report damaged equipment or property

Don't wait for accidents to happen. Stay alert for any damaged equipment or property which could cause an accident.
